Why I chose SweetAlert

I chose sweetAlert for my presentation because I thought it was a very neat idea. There have been many times that I have had to use alerts for my projects and I have always disliked how they looked. They look very outdated and out of place with the rest of the website.

I believe that it is good practice to not use a lot of alerts, this can be very annoying. But there are certain circumstances that call for an alert. In those certain instances, I would like to have an alert that doesn't look outdated. I understand that there are other ways to do this without using the alerts, but with sweetAlert it is so easy to set up a confirm alert to help the user make sure that it is what they want to do and the alerts look so beautiful compared to the default alerts.

I had a lot of fun creating this presentation. I was able to learn about a fully functioning HTML5 presentation as well as get more practice at using sweetAlert. I was also excited to be able to share a really neat and helpful plugin with the rest of my classmates.

The only image I used in my demo was the smiley face png. I got that from iconfinder.com The creator is Everaldo Coelho and I was allowed to use the image under the GPL license which is the General Public License.
